**2012-05 – Automatic On-Board Recording Devices (AOBRDs)**

**Summary**

This Inspection Bulletin reviews the requirements for devices used to record a driver’s hours of service according to 49 CFR 395.15 – Automatic On-board Recording Devices (AOBRD). It will identify the minimum requirements for a compliant AOBRD and information that must be displayed and available to roadside enforcement inspectors for hours-of-service compliance.

**Definitions**

As defined in 49 CFR 395.2, automatic on-board recording device (AOBRD) means an electric, electronic, electromechanical or mechanical device capable of recording driver’s duty status information accurately and automatically as required by 395.15. The device must be integrally synchronized with specific operations of the commercial motor vehicle (CMV) in which it is installed. At a minimum, the device must record engine use, road speed, miles driven, the date and time of day.

**AOBRD Information**

- Relay is installed in the cab of the vehicle & collects vehicle data
- Data is sent from the Relay to the mobile device via a wireless connection

Diagram: Integrally synchronized with specific operations of the commercial motor vehicle.

**Information Requirements**

AOBRDs must produce, upon demand, a driver’s hours-of-service chart, electronic display or printout showing the time and sequence of duty status changes, including the driver’s starting time at the beginning of each day. A device unable to print a copy of the driver’s record of duty status is not a violation if the device displays an hours-of-service chart or electronic display of each duty status change for the current day and the previous seven days.
2012-05 – Automatic On-Board Recording Devices (AOBRDs)

Support systems used in conjunction with AOBRDs at a driver’s home terminal or a motor carrier’s principal place of business must be capable of providing federal, state or local officials with summaries of a driver’s hours-of-service records.

**Minimum Electronic Display Requirements - 395.15(i)(5)**

AOBRDs with electronic displays shall have the capability of displaying the following:

- Driver’s total hours of driving today
- The total hours on duty today
- Total miles driving today
- Total hours on duty for the seven consecutive day period, including today
- Total hours on duty for the prior eight consecutive day period, including the present day
- The sequential changes in duty status and the times the changes occurred for each driver using the device

The AOBRD must also be capable of recording each driver’s duty status separately when there is a multiple-driver operation.

There is a requirement to record locations of each duty status change that need to be noted. For each change of duty status (e.g. the place and time of reporting for work, starting to drive, on-duty not driving and where released from work), the name of the city, town or village, with state abbreviation shall be recorded. Motor carriers are permitted to use location codes in lieu of the name of the city, town, village or state. When using location codes, the list of codes showing all possible location identifiers must be carried in the CMV and made available to an enforcement official upon request.

**AOBRD Inspection Guidance**

Federal, state and local officials need to check for the following during a roadside inspection when an AOBRD is being used:

- Verify the device is integrally synchronized with the CMV
- Ensure the device is capable of displaying the six data elements listed above under Minimum Electronic Display Requirements for the last seven days, plus the current day
- Each CMV with an AOBRD installed must have on-board an information packet containing an instruction sheet describing, in detail, how data may be stored and retrieved from the recording device
- A supply of blank record of duty status sheets (graph-grid) in case the AOBRD device fails to function is on-board the CMV for the duration of the current trip
- The driver can demonstrate the use of the device
The AOBRD is **not required** to produce a printed copy of the driver’s record of duty status at the time of the inspection.

The required on-board information may be any electronic means (including on the AOBRD) or hard copies.

**Examples of AOBRDs**
2012-05 – Automatic On-Board Recording Devices (AOBRDs)
The following is a chart that outlines the significant differences between an AOBRD and an electronic logging device (ELD).

**Inspection Bulletin Expiration**

This AOBRD Inspection Bulletin will be void effective Dec. 16, 2019, when AOBRDs must be ELD compliant.
