SUMMARY OF ISSUE

Cargo tanks missing bolts and/or nuts securing the internal valve to the tank.

JUSTIFICATION OR NEED

In a recent Regional COHMED Training class a student brought up an internal valve on a cargo tank that was missing bolt intended to secure the internal valve to the tank. The internal valve was not leaking. The issue is not addressed in the out of service criteria.

REQUEST FOR ACTION

Consider adding this to the out of service criteria.

ACTION TAKEN BY COMMITTEE

After receiving input from industry, it was determined that absent of a leak, a missing bolt would not present an out-of-service condition. No action taken.
